

BIO BARB

Features and Benefits

- True bore design through the entire adaptor provides consistency of flow
- Identical inner diameter of barb and tubing allows complete full drainage along an unimpeded path
- Smooth transition from tubing to adaptor reduces turbulence
- Oversized mono barb design facilitates a strong adhesion to the tubing and ties may not always be required
- Compression between the tube and fitting eliminates by-pass of the media to potential entrapment areas
- A slight raise at the port of the tri clover face ensures proper capture of the gasket
- Permanent moulded lot and size identification on the adaptor ensures total traceability and prevents incorrect usage
- Part number, size, date of manufacture, lot number and statement of compliance printed on the packaging for ease of identification.
- Produced from DMF listed polypropylene that complies with FDA and USP Class VI test protocols
