Capacitive Limit Switch Food NCS

Application / Specified Usage

· Limit detection of media with low or no water content like syrup, fruit concentrates, alcohols und oils with a dielectric constant $\varepsilon_r(Dk) \ge 2$

Application Examples

- · Limit detection in vessels (build-in position sidewise) or pipes
- · High alarm in vessels and tanks with build-in position from top (type NCS-L)
- Empty alarm in vessels and tanks with build-in position from bottom (type NCS-L)
- · Product monitoring in pipes
- · Pump / dry running protection

Hygienic Design / Process Connection

- · Flow optimized, hygienic and easy sterilizable installation by sleeve EMZ-132 or build-in system EHG-.../1/2" and EHG-.../M12
- · CIP- / SIP-cleaning up to 143 °C / max. 120 minutes
- · Product contacting materials compliant to FDA
- · Sensor made of stainless steel, sensor tip made of PEEK
- · Process connections see product information CLEANadapt, e.g: Tri-Clamp, dairy flange (DIN 11851), Varivent ...

Features

- · Independent of the conductivity
- · Insensitive to foam and adherence
- Short response time (< 1 s)
- · Reversible output (full / empty active)
- · Heated electronic to avoid condensation
- · Simulation of sensor status possible

Options / Accessories

- · LED state indicator with inspection window lid
- Version with spacer (option H) for isolated vessels or permanent process temperatures up to 143 °C (available for NCS-x1 and NCS-x2)
- · NPN output (Open Collector)
- · M12-plug and matching cable assembly
- · Heating element switched off for extension of the temperature range

NCS-L-11/50

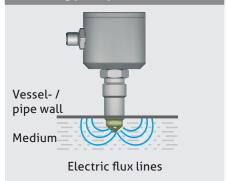

Measuring Principle

The capacity of a capacitor is affected by 3 factors: **Distance** and **size of the electrodes** as well as the **kind of medium** between the electrodes. Using the capacitive sensors only the kind of medium is of interest.

The electrode of the sensor and surface of tank can be seen as capacitor, the medium as dielectric fluid. Caused by the higher Dk-value of the medium compared to air the capacity increases if the sensor is covered with the medium. The change of capacity is evaluated by electronics and converted into a corresponding switching order. This functional principle requires that the sensor tip is completely covered with medium. That way the sensor is insensitive to foam and adherences.

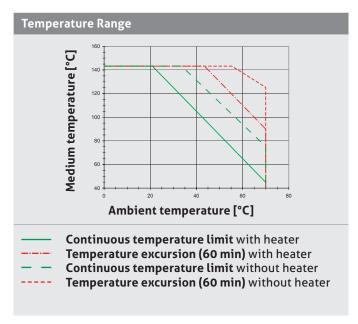

Measuring principle

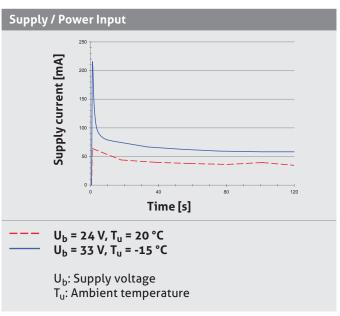

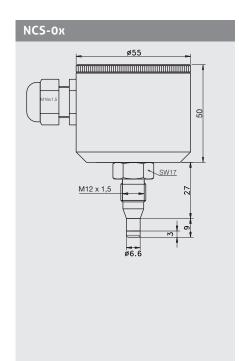

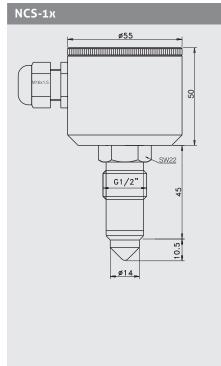

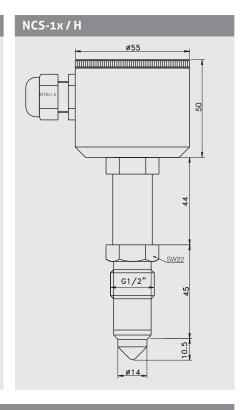

Specification				
Process Connection	thread tightening torque	M12 x 1,5, G1/2" CLEANadapt, combined with Negele weld-in sleeves, build-in systems, adapter sleeves max. 510 Nm		
Materials	connection head connection piece spacer sensor tip NCS-1x sensor tip NCS-0x, NCS-L	stainless steel 1.4305 (303) stainless steel 1.4305 (303) stainless steel 1.4305 (303) PEEK (FDA approval number 21 CFR 177.2414) stainless steel 1.4404 (316L)		
Surface Quality		R _a ≤ 0,8 μm		
Weight		ca. 500 g		
Operating Pressure		max. 10 bar		
Electrical Connection	cable gland cable connection	M16 x 1,5 (PG) M12-plug, stainless steel 1.4305 (303)		
Protection Class		IP 69 K (with cable connection) IP 67 (with cable gland)		
Supply		1632 V DC (see graphic)		
Output	optional	PNP (active 50 mA, short-circuit-proof) NPN (active 50 mA, short-circuit-proof)		
Switching Function	adjustable by polarity of supply	high active (sensor wetted: 'high') low active (sensor free: 'high')

Belated Shortage of Sensor Rod

Sensor length can be shortened by up to 50 mm. Thereby immersion length needed for switching can vary after cut down. These is about 5 mm at watery media.

Conventional Usage

- · Not suitable for applications in explosive areas.
- · Not suitable for applications in security-relevant equipments (SIL).

Electrical Connection NCS-x1, NCS-L-11					
Strip terminal	High active	Low active			
+ - A	1: + 24 V DC 2: 0 V 3: output	1: 0 V 2: + 24 V DC 3: output			
M12-plug	High active	Low active

4 3	1: + 24 V DC 2: control input 3: 0 V 4: output	1: 0 V 2: control input 3: + 24 V DC 4: output			

Mechanical Connection / Installation in Pipes

To guarantee a definite function, the sensor tip must be completely covered by the medium! A minimum filling level in the pipe is necessary to ensure that the sensor operates. This varies according to the mounting position (see figure "Build-in Position" on page 5):

for position 1: 100 % for position 2: ca. 92 % for position 3: ca. 60 % for position 4: ca. 30 %

for position 5: min. 11 mm

Position 2: Ideal installation as high alarm in horizontal lines; ensures that isolation of sensor tip by air bubble is prevented.

Position 4: Ideal installation as low alarm in horizontal lines; ensures that sensor tip is not covered with residues of medium.

- · Use Negele CLEANadapt system for all types of NCS to ensure safe operation of measuring point!
- · Attention: The maximum tightening torque for mounting is 10 Nm!
- · Use a welding mandril for correct installation of **CLEANadapt** weld-in fittings. Please pay attention to the weld-in and installation details in the **CLEANadapt** product information.
- · Do not use non-conducting sealants such as PTFE (Teflon) or similar.

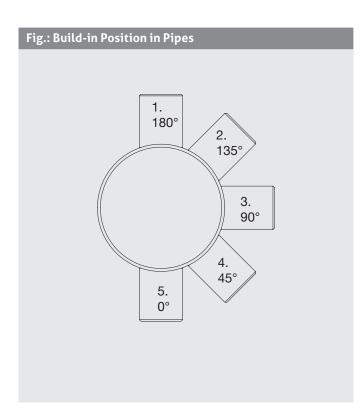

Installation Advices FOOD

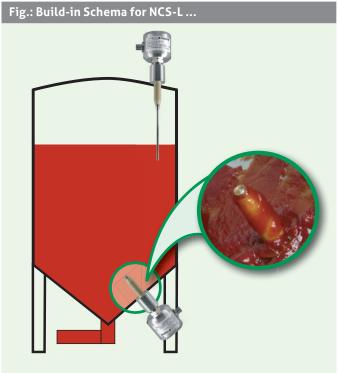

Conditions for a measuring point according to 3-A-Standard 74-03

5

- · The sensors NCS-x1 and NCS-x2 are approved according to the 3-A-Standard.
- · Only with the build-in system **CLEANadapt** (EMZ, EMK, EHG with tube ≥ DN25, ISO 20 and 1", Adapter AMC, AMV, AMA and AMB) allowed.
- The welding seam by using of EMZ and EMK has to correspond with 3-A-Standard 74-03, D6.1.4: "The minimum radii for fillets of welds in product contact surfaces shall be not less than 1/4 in. (6.35 mm) except that the minimum radii for such welds may be 1/8 in. (3.18 mm) when the thickness of one or both parts joined is less than 3/16 in. (4.76 mm)."
- · Self draining has to be warranted by the build-in position (pos. 1, 2 or 3, see figure "Build-in Position").
- · The process connection needs a self-draining leakage hole.

Handling / Operation

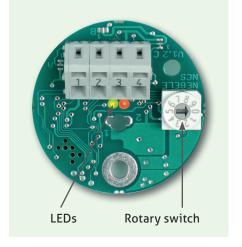

With the control input, the threshold of the limit switches with enhanced measurement range can be switched to threshold of Dk = 50 while operating. This could be useful to avoid false alarm at process steps with increasing frothing, CIP-cycles or similar.

Control input	Threshold		
0 V or not connected	like setting with rotaty switch		
+ 24 V DC	Dk = 50 fix		

LED status display

Showcase of media and specific Dk-value:

(the exemplarily Dk-values can vary acc. to different outside influences like temperature, fabrication, source etc.)

Medium	Dk-value
water	81
methanol	33
water (demineralized)	29
ethanol	25
honey, ketchup, mustard	24
acetone	21
skin cream	19
toothpaste	18
draff (residual moisture 20 %)	7
butter	6
milkfat	4
chocolate	3
vegetable oil	2

Example

At switch setting 5 (Dk = 35) the NCS-x1 will detect media with a dielectric constant of Dk \geq 35.

Information Process Connection

The complete assortment as well as the order code for build-in systems, weld-in sleeves and adapters you will find in the product information **CLEANadapt**.

Cleaning / Maintenance

· In case of using pressure washers, dont't point nozzle directly to electrical connections!

Transport / Storage

- · No outdoor storage
- · Dry and dust free
- · Not exposed to corrosive media
- · Protected against solar radiation
- · Avoiding mechanical shock and vibration
- · Storage temperature 0...40 °C
- · Relative humidity max. 80 %

Reshipment

- · Sensors shall be clean and must not be contaminated with dangerous media!
- · Use suitable transport packaging only to avoid damage of the equipment!

Standards and Guidelines

· You have to comply with applicable regulations and directives.

Advice to Conformity

- · Applicable guidelines: Electromagnetic compatibility 2004/108/EC
- · The accordance with applicable EC-guidelines is confirmed with CE-labeling of the device.
- · You have to guarantee the compliance of all guidelines applicable for the entire equipement.

Disposal

- · This instrument is not subject to the WEEE directive 2002/96/EC and the respective national laws.
- · Pass the instrument directly on to a specialised recycling company and do not use the municipal collecting points.
